ISO Documentation Management
in the V-Desk system

The ISO module enables the management of documentation, supervise audits an ISO training in any ISO - certified company.

ISO Documentation Management in the V-Desk system supports comprehensive organisation of document storage. By leveraging the application, an organisation ensures high efficiency and compliance with standard requirements.

How to orchestrate and monitor ISO document management?

1. ISO documents secure storage

One safe location of all articles and procedures. The solution enables quick access to the right information, resulting in significant time savings compared to the traditional form.

2. Document sharing

Sharing e-documents reduces the need for printing. Compared to paper versions, electronic document distribution is more efficient and allows immediate access management and permission definition.

3. ISO document version management

All operations and any record on documents subject to revision and review should be archived in the form of versioned files. This way there is always access to an updated and complete information and no risk of overwriting.

How does V-Desk streamline ISO management?

✓ **Automated workflow,** document approval and publication

✓ **Security against unauthorised access,** ensuring control and supervision of documents in one place

✓ **A structured and organised way to store** all documentation within ISO processes.
